Call for Proposal of Invited Review Paper

The Editorial Board of Advanced Biomedical Engineering (ABE) invites you to submit review papers to ABE. The journal is open access, and is indexed in Emerging Sources of Citation Index, Scopus, etc.

Research fields of biomedical engineering are broad, and for researchers working in the field, it is not easy to learn theories and techniques that they need to conduct their studies and developments. Consequently, it is beneficial for readers of ABE to publish valuable review papers in which theories and/or techniques are described comprehensively and concisely.

The contents are not limited to so-called review papers, and any elucidative articles on a specific topic are accepted.

You can submit a single paper written by yourself, or multiple papers written by you and your colleagues.

Please let us know your proposal via abe@capj.or.jp, in which you should give us the following information:

1. Your name, affiliation, and contact e-mail address.
2. The name(s) of co-author(s) and their affiliations, if any.
3. The tentative title. In the case of the multiple submissions, please present all of the titles with the series name.
4. Brief description on your paper(s). If not invited by the Editorial Board, please include new insights the author(s) provided in your paper . Also, please add a list of the important references you have surveyed.
5. The expected date of the submission. In the case of multiple submissions, please specify each dates.

You will receive a notification to submit your review article after a successful initial quality review by our editorial board.

The length of the review article is assumed to be no more than 6 pages.

Note that your manuscript will be peer-reviewed by the editorial board of ABE. In addition, before

submission, you are requested to have your manuscript proofread by a professional English editing agency as mentioned in the chapter 4 of Instruction for Authors. Finally, please be advised that the Editorial Board reserves the right to request revisions and to reject the manuscript.

We are looking forward to your proposal.

Yutaka Fukuoka, Ph.D.

Editor-in-Chief
